Science Bits has joined the Edutone Single Sign-On (SSO) Markeplace part of Intel Education

March 26, 2014. Science Bits has announced today that it has joined the *EduTone Single Sign-On (SSO) Marketplace part of Intel Education* which is an on-demand catalog of cloud-hosted, third party try and buy services for the K-12 education market segment.

"We're excited to partake in the *Edutone SSO Marketplace part of Intel Education* because this service makes excellent resources — both from a technological and an educational perspective—easily available to teachers and students worldwide," said Ariadna Álvarez, Director of Science Bits. "This service grants us the opportunity to offer content that engages students and supports teacher immersion in the 5E constructivist model and in the use of IT in the classroom," continued Ariadna.

"We are happy that Science Bits has joined the *EduTone SSO Marketplace part of Intel Education*," said Julian Mobbs, CEO of EduTone. "It is exciting to have a World Class company like Science Bits that can really excite students about Science as part of the Marketplace," continued Julian.

The EduTone SSO Marketplace part of Intel Education is coming soon and will be accessible through the EduTone SSO Passport which enables distribution partners to offer school customers the ability to immediately provision any best of breed, web-enabled content or software services to their teachers and students from an on-demand catalog.

About Science Bits

Behind the Science Bits project there is a multidisciplinary team of science teachers, educators, video editors, and multimedia professionals. Our goal is to provide teachers with tools that promote a high quality science education.

Science is not a body of immutable facts that must be memorized, but an exciting way of obtaining new knowledge and understanding the world around us. Hence, we adhere to the constructivist 5E learning model, which promotes real understanding and engages students in science learning while helping them understand the relevance of science to their lives. We would like to play an active role in promoting the change from a transmission educational model, based on the transmission of facts from teacher to learner, to a constructivist one, based on inquiry, discovery and learning-by-doing. We think the best way to bring about this change is to empower teachers with user-friendly tools of great educational potential. For more information visit: **www.science-bits.com**

About EduTone Corporation

EduTone provides cutting edge, cloud-based, device and platform agnostic services specifically designed for today's K-20 institutions.

EduTone Xchange™, its multiple award-winning, fully-integrated, customisable, end-to-end services delivery platform provides educational institutions with secure Single Sign-On, automated role/policy-based provisioning and identity management for all web-enabled applications, content and communities.
